

Cameron MacKeen, PhD

Data Scientist | Material Scientist

202 Northrop Pl, Santa Cruz, CA, United States

(+1) 508-245-7741 | cammackeen@gmail.com | cmackeen.github.io

Skills

Programming: Python (pyspark, pandas, scikit-learn, sqlalchemy, tensorflow, flask, plotly, bokeh) · Kafka · Linux shell scripting · AWS · Spark · SQL · Java · C++ · MATLAB · Javascript

Work Experience

Graduate Researcher

UNIVERSITY OF CALIFORNIA, SANTA CRUZ — DR. FRANK BRIDGES

June 2014 - March 2019

- Many research projects resulted in academic publications, awarded Chancellor's Dissertation Fellowship for achievements.
- Analyzed interference patterns of the X-ray absorption fine structure, engineered physical models using high parameter fits.
- Successfully collected and processed data, iterative background characterization with command line and Linux shell scripts.
- Created automated analysis framework with Python to optimize pipeline, redefined lab procedures, and saved 600 work-hours.
- Discovered two new, self-consistent algorithms for extracting an anomalous parameter of a general stochastic distribution.

Research Assistant

SLAC/SSRL

June 2018 - January 2019

- Contracted on DOE molten-salt reactor project for interface characterization between a vessel alloy and salts.
- Learned procedure in novel grazing incidence x-ray absorption and diffraction techniques, certified radiation worker.
- Designed algorithm to index peaks and identify phases at variable depths; analyzed grazing-incidence XANES/EXAFS data.
- Discovered corroborating results of oxygen coordination; results presented at DOE project phase review.

Data Scientist

SERACARE LIFE SCIENCES — LORN DAVIS

May 2016 - September 2016

- Created precision-incentivized model to maximize profit from \$600k of stagnant inventory, while increasing turnover ratio.
- Employed AWS and cleaned large data sets; began with an analytical overview of test data and imputed sparse features.
- Engineered features and developed a random forest model coupled with an industry-based economic loss function.
- Presented results and strategic roadmap to executives, with explicit short-term action items for next phase of program.

Machine Learning Engineer

CONCORD CONSORTIUM — DR. HEE-SUN LEE

January 2015 – May 2015

- Utilized Python to parse and clean log data of students' interactions with computer module, engineered entropy-based features.
- Self-taught R to use Rattle for statistically analyzing data and developed a binary decision tree model to categorize students.
- Compiled results and protocols in a manuscript; established new link between student understanding and action entropy.

Undergraduate Researcher

UNIVERSITY OF MASSACHUSETTS, AMHERST — DR. ANDREA POCAR

April 2010 – June 2013

- Erected an ultra-high vacuum manifold with a liquid nitrogen plumbing system to cool avalanche photodiodes.
- Constructed a circuit to bias photodiodes, wrote C++ scripts to interface with circuit board firmware for signal analysis.
- Research presented at symposium; awarded an Honors grant and fellowship for exceptional work.

Education

University of California, Santa Cruz

PH.D. IN PHYSICS

September 2013 – March 2019

- Published 6 papers (3 first authors) and collaborated internationally.
- Awarded Chancellor's Dissertation Fellowship.
- Trained multiple students in lab technique and analysis, delegated research tasks, assisted students on individual projects.

University of Massachusetts, Amherst

B.SC. IN PHYSICS AND MATH

September 2009 – May 2013

- Submitted Honors Senior Thesis on research, received an Honors grant and Cervo fellowship.
